

# DATA ANALYSIS USING PYTHON-Internship

## Task 3 (Medium) – Country-Wise Netflix Content Analysis

#Step-1.

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
```

```
# Step 1: Extract and clean country information.
```

```
df=pd.read_csv("cleaned_netflix_titles.csv")
```

```
df['country']=df['country'].astype(str).str.split(',')
```

```
exploded_df=df.explode('country')
```

```
exploded_df['country'] = exploded_df['country'].str.strip()
```

```
print(f"Original dataset rows: {df.shape[0]}")
```

```
print(f"Expanded country-level rows after extraction: {exploded_df.shape[0]}")
```

Original dataset rows: 8790

Expanded country-level rows after extraction: 8790

#Step-2.

```
# step 2 Step 2: Calculate content count by country.
```

```
df=pd.read_csv("cleaned_netflix_titles.csv")
```

```
clean_countries=df['country'].str.split(',').explode()
```

```
country_aggregates=clean_countries.value_counts()
```

```
print(f"Content Counts Aggregated by country:{country_aggregates.head(10)}")
```

Content Counts Aggregated by country:country

United States      3527

India                1057

United Kingdom    638

Pakistan           421

Canada             271

Japan               259

South Korea        214

France              213

Spain               182

Mexico              138

Name: count, dtype: int64

### #Step-3

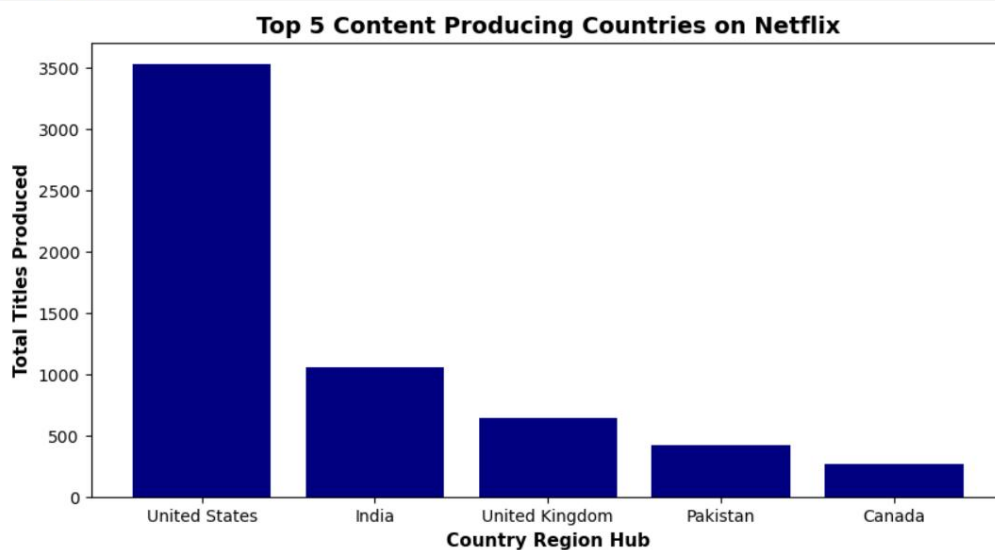

```
# step 3:Step 3: Identify top content-producing countries.  
  
# Here i simply find the top 5 country produce top content by head() function.  
  
country_aggregates.head()
```

```
country  
United States    3527  
India            1057  
United Kingdom   638  
Pakistan         421  
Canada          271  
Name: count, dtype: int64
```

United States is the top content producing countries comparison among other country .The content count by US is 3527. It is higher among country like India, United Kingdom,Pakistan.

### #Step-4.

```
# Step 4: Create charts and rankings.  
  
# here i generate the chart by using barchart of top 5 highest rank countries  
  
top_5_ranking=country_aggregates.head()  
plt.figure(figsize=(10,5))  
plt.bar(top_5_ranking.index,top_5_ranking.values,color='navy')  
plt.title("Top 5 Content Producing Countries on Netflix", fontsize=14, weight='bold')  
plt.xlabel("Country Region Hub", fontsize=11, weight='bold')  
plt.ylabel("Total Titles Produced", fontsize=11, weight='bold')  
plt.show()
```

From given chart United States is highest rank country in content production above>3500.

## # Step 5: Generate business insights.

From above bar chart clear visible the overwhelming dominance of the United States as the premier content Cluster underscores a core operational reality:Netflix's content engine remains structurally anchored in Hollywood infrastructure.

->The emergence of heavyweights like India, the United Kingdom, Pakistan and Canada as top production tier countries reflects a transition from global distribution to Hyper localization.

# The Maturity Strategy (UK & Europe): -> Investing in the UK and European ecosystems allows Netflix to capture highly exportable, premium English-language and cross-continental dramas that achieve a strong return on invested capital (ROI) across both Western and non-Western subscriber bases.

# The Non-Western Acquisition Engine (India & APAC):-> High-volume outputs in regions like India represent direct consumer acquisition tactics.In these markets, subscriber growth is heavily dependent on localized cultural resonance by establishing regional production hubs, the company converts local cultural narratives into a powerful subscriber engine, driving down customer acquisition costs (CAC) in high-population, mobile-first territories.
